DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Anandan (US 2005/0007517).

Regarding claims 1-4, Anandan discloses a metal electrode layer for supplying voltage and has a reflecting surface (Fig. 1, 5; Page 2, Paragraph [0030]; Fig. 3, 32; Page 3, Paragraph [0034]); an organic light-emitting diode layer disposed above the metal electrode and driven to emit light by supplying a voltage to the metal electrode (Fig. 1, 4; Page 2, Paragraph [0030]; Fig. 3, 32; Page 3, Paragraph [0034]); a phase transforming film disposed above the organic light-emitting diode wherein the phase transforming film is a twisted nematic cell having a retardation state of a quarter-wave phase difference (Fig. 2, 200; Page 3, Paragraph [0033]; Fig. 3, 31; Page 3, Paragraph [0034]) that can be converted to have a retardation state with zero phase difference; and a polarizer disposed above the phase transforming film (Fig. 2, 25; Page 3, Paragraph [0033]; Fig. 3, 31; Page 3, Paragraph [0034]).

Application/Control Number: 10/790,745

Art Unit: 2879

Regarding claim 1, note that the phrases "and driven to emit light by supplying a voltage to the metal electrode," "can be converted to have a retardation state with zero phase difference," and "having a retardation state of quarter-wave phase difference" are directed to the capability of the elements to perform the recited function, the recitations are not a positive limitation but only requires the ability to so perform. As such, since the Anandan reference discloses all of the claimed structural elements, the Examiner considers the claims to be fully anticipated by Anandan.

Regarding claims 3 and 4, note that both claims are considered as claims to a method of operating the device of claim 1. Since the Anandan reference has all of the claimed structural elements of claim 1, the Examiner considers claims 3 and 4 to be fully anticipated by Anandan.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anne M. Hines whose telephone number is (571) 272-2285. The examiner can normally be reached on Monday through Friday from 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimesh Patel can be reached on (571) 272-2457. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
